\* Lela's father, Jessie McFarland, had a McFarland stepfather, but his biological father's name was Moles.

**ADDITIONAL NOTES:** The Norwegian family branches have a history of name changes. One of the prominent old names is Bøen (now Bøhn) which is pre-Klemmetsrud (Klemesrud). From 1862 to 1866 Knud Klemesrud lived on the Ildjarnstadhaugen farm and went by that name. In Norway, Norby was spelled Nordby. One of the Grøv family lines is about 0.0003% Scottish, not even enough to alter the numbers above. My Irish McCormick great-great-grandfather had an English mother. The Lipe branch of the family is mostly German but traces back to the Leipp family of Switzerland. Moles is a Scottish name but that clan stems from Molesworth in England. Johanna Wetzel's maiden name was Haise. She may have been unofficially adopted by the Ball family that founded the town of Ballwin, Missouri. The Ball family was Irish, but census records and her death certificate show that she was German.

## AncestryDNA Ethnicity Estimate for John Eric Klemesrud

	FAMILY TREE COMPARISON	DNA FROM FATHER	DNA FROM MOTHER	DNA ESTIMATE	NOTES
Norwegian	25.00%	36%	5%	41%	The dramatic increase in the Norwegian compared to the family tree research percentage seems to be in sync with the fact that I look more like that side of the family.
Danish/Swedish	0%	0%	5%	5%	Unknown origin. Viking incursion by the Danes?
Finnish	0%	2%	0%	2%	Unknown origin but close to Norway.
Cyprus	0%	1%	0%	1%	Unknown origin. Traveler? Viking incursion?
German	53.075%	2%	17%	19%	I assume this decrease is because I don't take after that side of the family as much. Some of the 23% NW European from my mother could be grouped with the German as these regions overlap. However, it's clear that my mother's side was not as purely German as the family tree research shows.
Swiss	0.05%				
English & NW European	12.50%	5%	23%	28%	The DNA results don't support a Scottish heritage even though records show that Lela's father, Jessie Moles, claimed to be Scottish. He must have been more English. The Moles paternal line comes from a place right on the Scottish/English border with a family connection to Molesworth, England.
Irish	9.375%	4%	0%	4%	It's estimated that Lela was 37.5% Irish from the Brady and McCormick family lines.

Note that siblings can have different DNA ethnicity test results depending on whom they take after.

Scandinavian Total: 48%
